OBJECTIVE

Software Engineering student building a strong foundation in web development, programming, and software design. Experienced with HTML, CSS, and C++, and currently expanding into full-stack development. Looking to apply and grow these skills through an internship or entry-level opportunity.

EDUCATION

B.Sc. in Software Engineering (2nd Year)
Addis Ababa Science and Technology University (AASTU)

CERTIFICATION

Frontend Development Certification
Google Developer Group (GDG)
Data Science Fundamentals
(5million coders)
International youth math challenge
International youth math competition(IYMC)
Basics of python
Uniathena
Basics of problem solving
Uniathena

SKILLS

HTML • CSS • C++ • MySQL • Git & GitHub • Python • Docker(little bit) • PostgRSQL

PROJECTS

- **Movie Search Website —** Capstone project built with a team at GDG; lets users search for movies using a public API. Built with HTML, CSS, and JavaScript.
- **Meal Recommendation App —** Hackathon project built with a team at GDG. Helps users find meals with budget tracking, fasting/non-fasting options, and a restaurant locator.
- **Restaurant Website —** Frontend website (HTML/CSS) with a home page, menu section, gallery, and contact section.
- **Asash Tour —** Tour agent website (HTML/CSS) showcasing Ethiopian travel destinations and tour services.
- **Digital PC Management System —** Team project (C++, MySQL) to digitalize tracking and management of PC information and usage.
- **Digitalized Cafeteria System —** Team project (C++, MySQL) to manage cafeteria data and improve food ordering and service.
- **Mekakel —** individual project (react, node.js, postgrSQL, TypeScript,Tailwind CSS) is a blood coordination website platform that connects hospitals, clinics, and volunteer donors to help people find compatible blood when they need it.
- **Mekenet —** (flutter, node.js…) is a mobile application designed to provide users with digital services and make certain tasks easier through their smartphones.

RELEVANT COURSEWORK

- **Databases —** SQL query writing (JOIN syntax) and ER diagram design for real-world schemas (registration, hospital, workforce, shopping, real estate systems).
- **Economics —** Consumer theory, utility maximization, and marginal/average product of labor.
